Subject: Co-location link loss budget calculation elaboration

Hi

The Commission is seeking an elaboration on information that you have already supplied - please note that we are not at this stage seeking any new material.

Submissions in front of the Commission imply that the "link loss budget" can be calculated using at least two different formula

Using nomenclature provided by Kordia, Cross Submission on Draft Mobile Co-Location STD, 8 Sept 08, para 23,24

$[N + I(\text{ext})] / N$

and

$[N + I(\text{int}) + I(\text{ext})] / [N + I(\text{int})]$

Please respond to the following questions

What is your understanding that the maximum link loss budget should be under each of the following two calculations

1) $[N + I(\text{ext})] / N$

and

2) $[N + I(\text{int}) + I(\text{ext})] / [N + I(\text{int})]$

I would appreciate your response by Monday morning.

thank you

Bruce Officer
